

User Guide 33C Installing Lodging Party digital certificates on a USB security token – Internet Explorer

Purpose of this Guide

The purpose of this guide is to provide information on how to install your digital certificates on a USB security token using Internet Explorer. Lodging Party signing users must store their certificates on a USB security token. If you are exempt from this requirement, please follow User Guide 33A or 33B instead.

Notes

1. This guide follows on from User Guide 32 - Applying for a Certificate Manager Digital Certificate, or from User Guide 35 – Applying for a standard digital certificate.
2. Once your certificate has been approved by Symantec, you will receive an email containing instructions to assist you with installing your certificate. The email will look similar to the sample email shown in 33.3 below.
3. Whilst SPEAR can be used with any supported browser (including Google Chrome, Mozilla Firefox or Internet Explorer), you **must** use Internet Explorer to install your certificate.

33.1 Install the eToken software

If not already installed, download the Safenet Authentication Client software for your relevant operating system from the DigiCert website:

<https://knowledge.digicert.com/generalinformation/INFO1982.html>

Once downloaded, run the file to install the software, selecting the default options throughout.

33.2 Change your eToken password

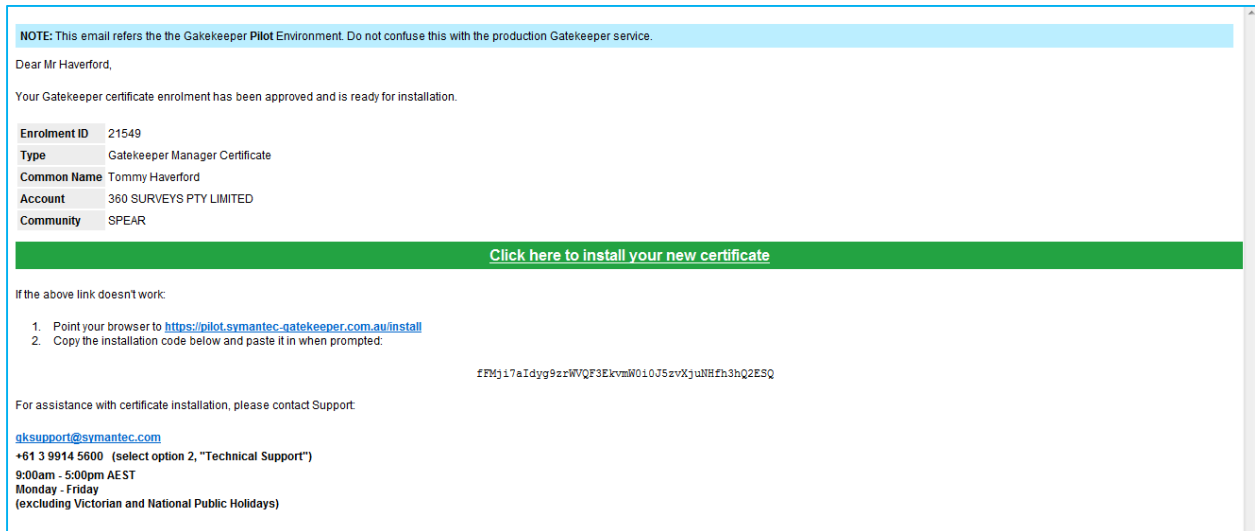

Once the software has been installed, insert your USB security token into one of your computer's USB ports. If this is the first time you've used this token, the software will prompt you to change your password.

NOTE: The default token password is: 1234567890

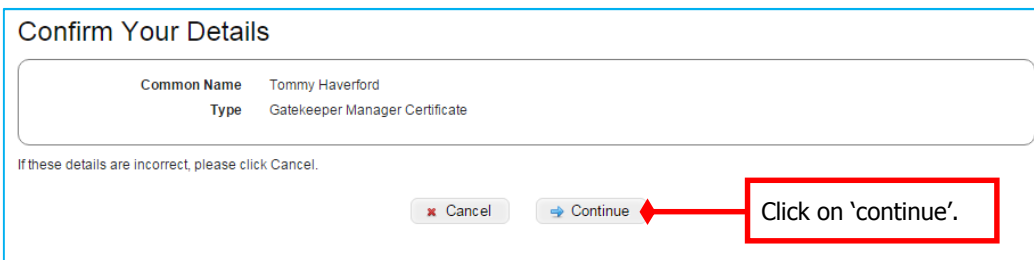

33.3 Install your certificate

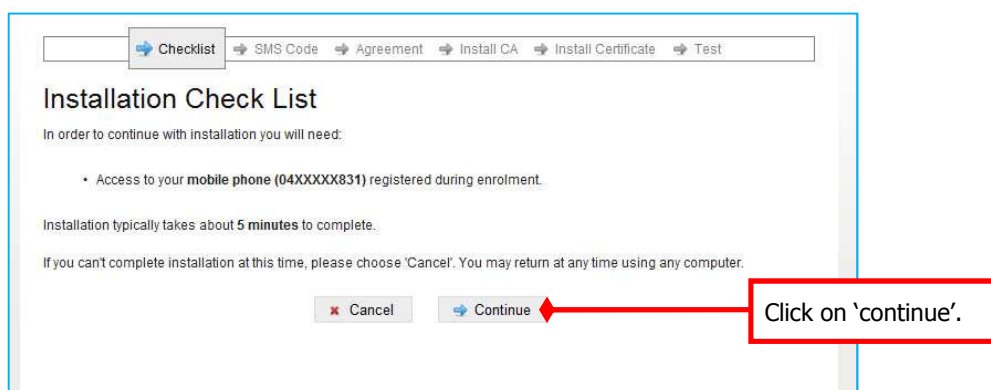

To commence the installation of your certificate, click on the hyperlink contained in the email sent to you from Symantec.

Confirm that the details displayed are correct.

Have your mobile phone ready.

Enter the code sent to your mobile.

Accept the Gatekeeper Subscriber Agreement

Please read and consent to the Symantec Gatekeeper Subscriber Agreement:

The agreement below applies only to *Production Gatekeeper Certificates*. You are installing a *Pilot Certificate* and are not bound by these terms. This step is included only to accurately mirror the installation experience in *Production*.

Your Agreement

SYMANTEC GATEKEEPER 2.0 CERTIFICATE SUBSCRIBER AGREEMENT

YOU MUST READ THIS SYMANTEC GATEKEEPER 2.0 CERTIFICATE SUBSCRIBER AGREEMENT ("AGREEMENT") BEFORE APPLYING FOR, ACCEPTING, OR USING A SYMANTEC GATEKEEPER INDIVIDUAL, BUSINESS, OR DEVICE CERTIFICATE (EACH, A "CERTIFICATE"). IF YOU DO NOT AGREE TO THE TERMS OF THIS AGREEMENT, DO NOT APPLY FOR, ACCEPT, OR USE THE CERTIFICATE. BY CLICKING "ACCEPT" BELOW OR BY ACCEPTING OR USING A CERTIFICATE, YOU AGREE TO BECOME A PARTY TO, AND BE BOUND BY, THESE TERMS.

1. Background

1.1 The Australian Government Information Management Office (AGIMO) has accredited Symantec (Australia) Pty Ltd ("Symantec") to provide certain PKI services to, or for the purposes of, Australian government agencies.

Download as PDF

I, Mr James Fox, agree to be legally bound by the terms of the Symantec Gatekeeper Subscriber Agreement.

Continue

Agree and click `Continue`.

Install the Certification Authority.

Checklist SMS Code Agreement Install CA Install Certificate Test

Install Certification Authority

Follow the instructions to install the Gatekeeper Root Certification Authority (CA).

1. Click the link below to install the Root Certificate.
2. You will see a File Download prompt. Click **Open**.
3. Click **Install Certificate...** and then **Next**.
4. Choose the option **Place all certificates in the following store** and click **Browse**.
5. Select the **Trusted Root Certification Authorities** store.
6. Click **Next** and **Next**.
7. You'll be asked for confirmation to install the root certificate. Click **Yes**.

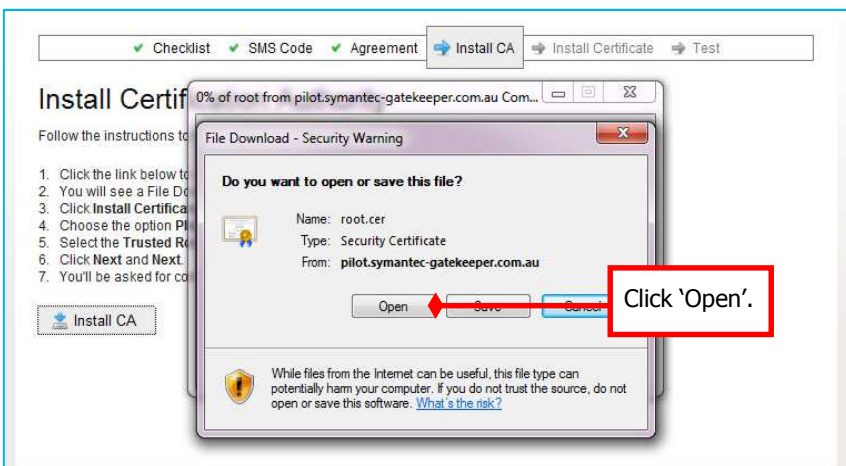

Install CA

Read the instructions then click `Install CA`.

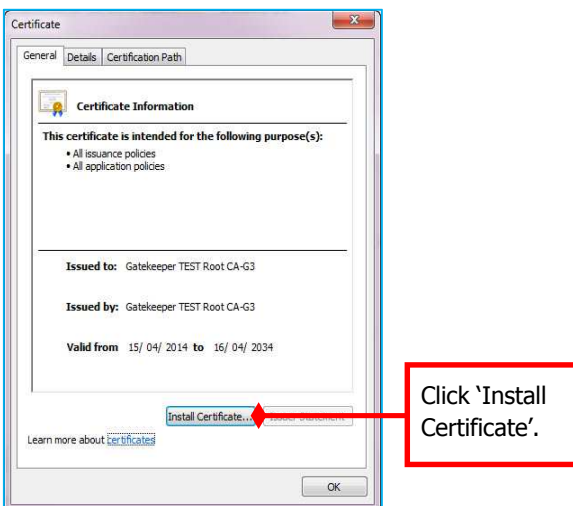

NOTE: Click 'Allow' or 'Yes' on any Internet Explorer Security Warnings that appear throughout the installation process.

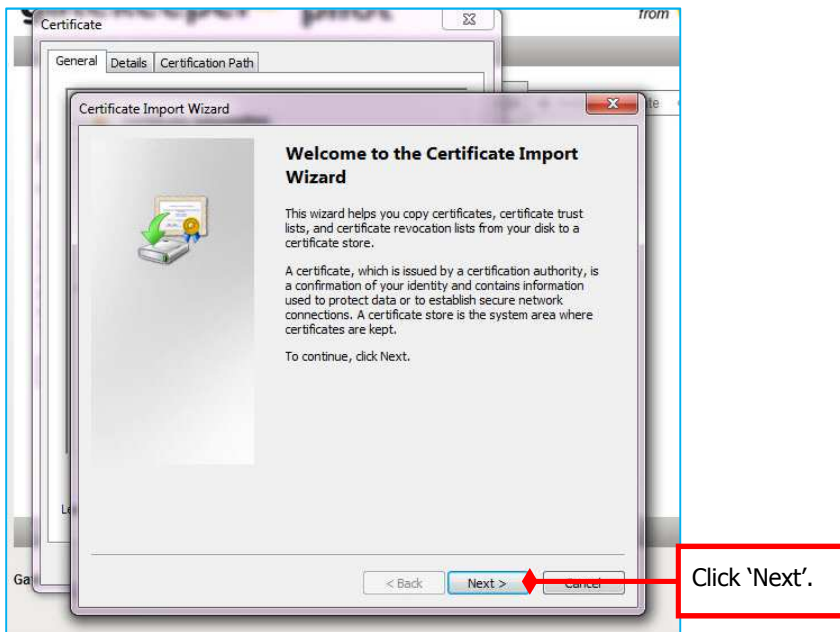

Click the 'Open' button on the downloaded file.

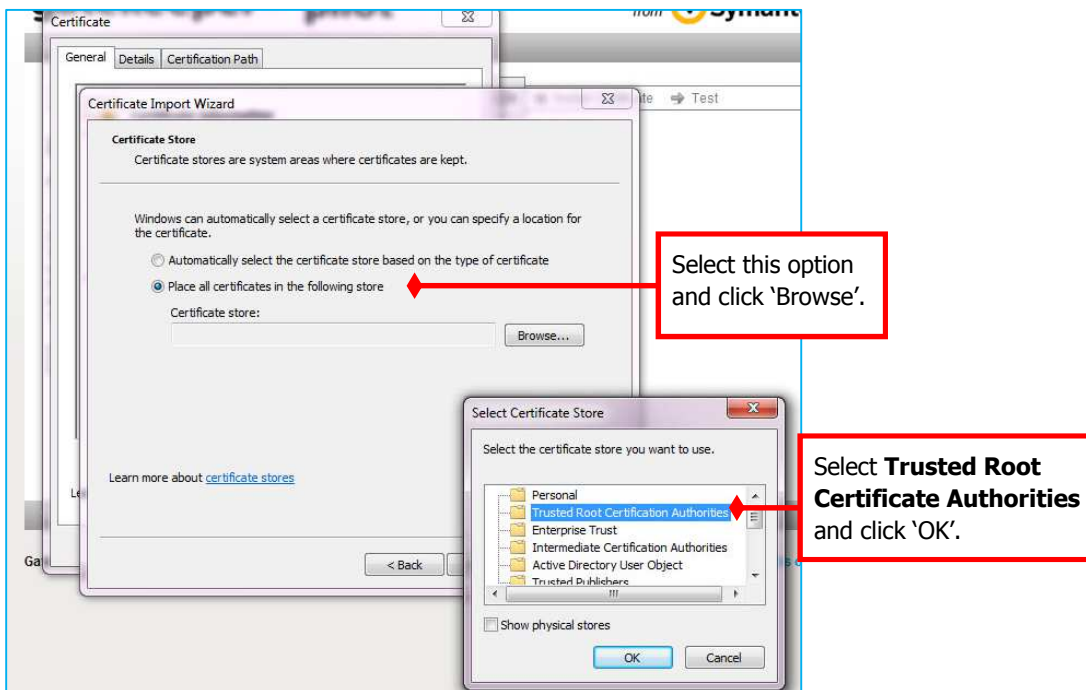

Click 'Install Certificate'.

Click 'Next' on the 'Certificate Import Wizard' screen.

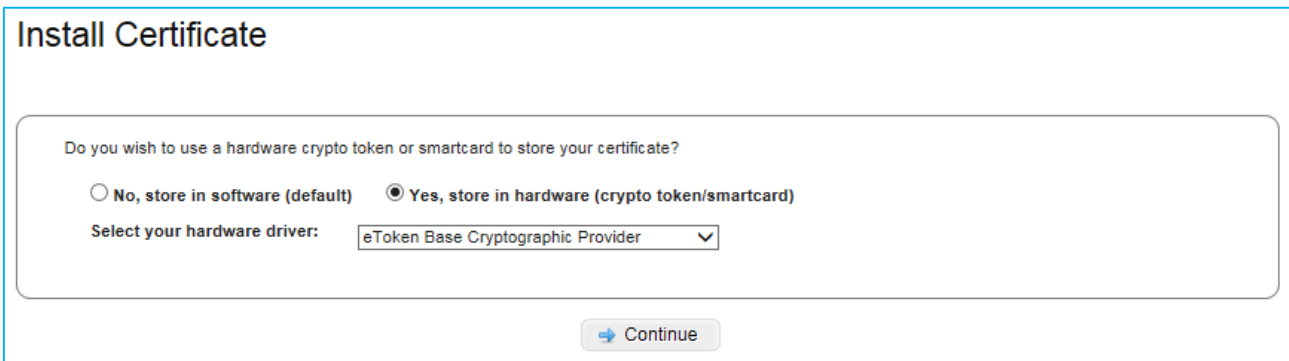

Select the 'Trusted Root Certificate Authorities' certificate store.

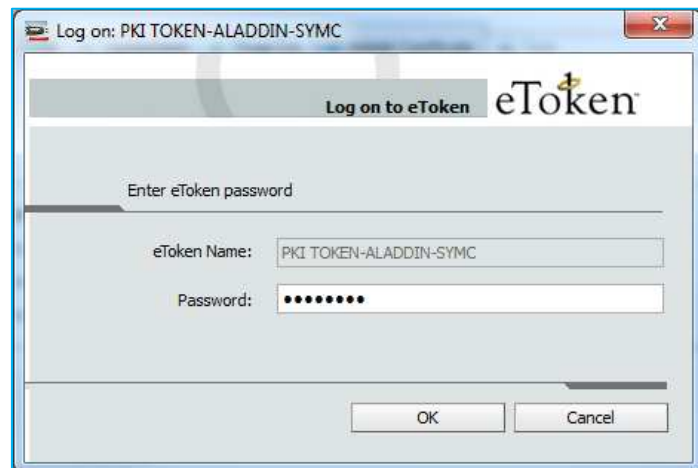

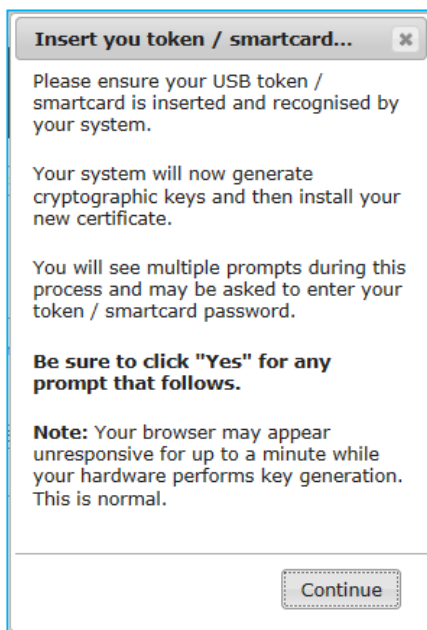

Click 'Next' and then 'Finish'. A window will pop up to confirm installation was successful. Click 'OK' to close any open windows and return to the Symantec installation process before continuing to the next step.

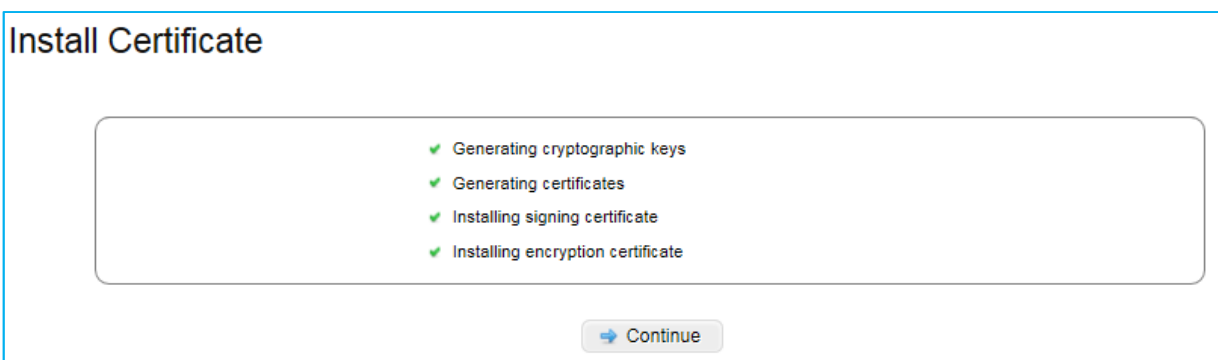

During the installation process, you will be asked whether you wish to use a hardware crypto token to store your certificate. Click 'Yes, store in hardware' and select 'eToken Base Cryptographic Provider' from the hardware driver drop-down list.

When prompted to insert your token, ensure it is inserted into one of your computer's USB ports. You will then be prompted to enter your token password to install the certificate.

NOTE: Installation may take a few minutes and the light on your token will flicker during this time. Please wait for green ticks to be displayed against all items before continuing.

Following installation, you will be asked to test your certificate.

Select your new certificate to test.

Enter your token password when prompted.

Once the test has been completed successfully, the installation process is complete. There is no need to back up your certificate as it is stored securely on the USB security token.

33.3 What next?

Certificate Manager Digital Certificate holders can now approve standard digital certificates for other members of your organisation. Please refer to User Guide 37 - Certificate Manager guide to managing certificates.

If you will be using your certificate in SPEAR to sign key documents, you can now test it. Please see User Guide 34 – Testing your digital certificate for more information.
